The technology behind better businesses

Technology is the muscle behind user experiences, and it directly relates to your bottom line. By leveraging the right infrastructure, you can build and scale smarter, optimize the user experience, and improve security.

Security

The Fastly Next-Gen WAF (powered by Signal Sciences) is the only web application firewall that can protect your websites, apps, and APIs everywhere from one unified solution. It’s so effective, 90% of customers use it in blocking mode.

- **Protection and performance**: Don’t choose one or the other — our DDoS, next-gen WAF, and TLS solutions provide protection and control without sacrificing performance.
- **Developer centric**: Get the visibility you need to integrate security into your DevSecOps lifecycle.
- **Award-winning protection and customer support**: Trust in a solution recognized in the Gartner Magic Quadrant for Web Application and API Protection for the past three years.
- **Flexible deployments**: Deploy wherever your apps operate — cloud, containers, on-premise, and at the edge — and easily manage the protective capabilities via management console or API.

Fastly’s Next-Gen WAF (powered by Signal Sciences) has been rated a Gartner Peer Insights™ Customers’ Choice for Web Application and API Protection. We are the only vendor to win this award four years in a row, with an overall rating of 4.9/5 as of Dec. 31, 2021, based on 267 reviews.

Compute@Edge™

Our serverless compute platform empowers you to build high-scale, globally distributed applications and execute code at the edge without having to manage the underlying infrastructure.

• **Instant global scalability**: Write, deploy, and test your code on the Fastly edge, then leave the delivery and scale to us.

• **Faster code execution**: Ditch the cold starts and roundtrip delays and get a 100x faster code execution startup time\(^1\) than other serverless solutions.

• **Familiar tools and languages**: Program in familiar languages, like Rust and JavaScript, and seamlessly integrate into your tech stack with our robust partner ecosystem.

• **Enhanced security and reliability**: Protect against side-channel attacks and limit the blast radius of buggy code or configuration mistakes with our isolated sandbox technology.

Delivery

Our delivery solutions give you everything you need from a modern content delivery network (CDN) — effortless scale, built-in security, programmable control, and full visibility.

• **One modern network**: Move data and applications closer to users and deliver the latest content quickly via strategically placed, highly performant POPs.

• **Fully configurable**: Instantly purge stale content (150 ms\(^2\) mean purge time), reset times to live (TTL), or turn on new features with an API-first network that integrates with common CI/CD toolchains, config management tools, and code repo systems.

• **Real-time visibility and control**: Find and respond to performance and security issues quickly with advanced observability features that give you full control over your configuration.

• **Savings and efficiencies**: Minimize trips to the origin to reduce infrastructure and egress costs, and deliver a better user experience by caching more at the edge — even dynamic content that changes often.

Getting started

Find out why customers like the New York Times, Stripe, and Shopify choose Fastly.

Whether you're streaming to millions of customers, prepping for a big sale, or processing thousands of transactions per second, Fastly can help. Find out how.

Enjoy world class support

With a customer satisfaction rating (CSAT) of over 95% for the past three years running, we pride ourselves on our customer relationships. Fastly’s world-class support includes help from engineers through chat, in-depth technical documentation, solutions packages, and more. With choices ranging from white-glove to self-service, we offer everything to fit your support needs.
