

Fastly WAF Management Package

QUICK VALUE PACKAGES

Unleash the value of Fastly without tying up scarce IT resources

Applications are a critical part of your business. Whether they're customer-facing, internal or partner apps, you need to protect them and the data they hold. Unfortunately apps are also an increasingly attractive target for cybercriminals. Many have known vulnerabilities that attackers can readily exploit, leading to potential downtime or data breaches, which can damage your brand reputation.

Web Application Firewalls are designed to safeguard your apps from the latest threats and vulnerabilities. However, managing your WAF rulesets to keep up with the latest exploits and zero-day threats can be an extremely time-consuming task. This is where Fastly's WAF Management Package can help.

This professional services offering reduces the manual overhead associated with the ongoing maintenance of your Fastly WAF service. Plus you get to tap into Fastly's deep security expertise for added peace of mind. It includes ongoing tuning and configuration to protect against critical threats, in addition to origin protection for each service running WAF. Fastly's WAF Management Package is for customers who have already purchased and provisioned our WAF service. This engagement is designed to run for the term of your WAF contract.

WHAT'S INCLUDED?

WAF tuning and configuration

Fastly will provide the following services:

- Update your WAF profile to record any new changes to your back-end application stack, or perceived security risks based on actual or attempted attacks
- Update your WAF configuration set to the latest available (if applicable)
- Enable, disable or change new or existing WAF rules based on new traffic patterns or security risks not present in the initial tuning cycle (once per quarter, or on demand as needed)

- Provide critical attack mitigation help on demand (up to 3x per quarter)
- Upon request, Fastly will add new critical protections (if applicable) into your WAF service

Authenticated TLS to origin

- To help protect you against WAF bypass attacks, Fastly will configure client-authenticated connections to your origin server for each service running WAF. As part of this service, Fastly can update your certificates prior to expiration, or if revoked. We can also generate certificates and keys on your behalf.

Benefits

Reduce staff burden

Fastly's WAF Management Package reduces the burden on your security and IT staff. We take care of maintaining your WAF rulebase, including testing and validating new rules. Our experts tune your service, freeing you from the arduous task of troubleshooting for false positives. You can repurpose critical security resources to focus on other more strategic projects.

Improve overall security posture

Fastly ensures you always have the most up-to-date rulesets deployed. Our WAF rules are based on open source rules (including the OWASP Core Rule Set), commercial source and Fastly-generated rules. For an added layer of protection, we set up client-authenticated connections to your origin server for all your WAF services. This protects you from savvy attackers who may try to bypass your WAF service by going directly to your origin.

Tap into broader security expertise

Augment your security staff with deep expertise from Fastly's dedicated Security Research Team. Our experts have years of experience in attack research, and collaborate in a variety of cybersecurity communities to stay abreast of emerging attacks. Our global network gives us first hand insights into potential traffic attack patterns so we can be more proactive on your behalf.

Fastly Quick Value Packages

Fastly's WAF Management Package is one of several **Quick Value Packages** designed to speed up time to value. These professional services offerings help you get the most out of your Fastly deployment without tying up scarce IT or engineering resources. You get direct access to our technical experts for a variety of one-time or annual engagements. Whether you're responding to shifting digital requirements, embracing agile processes, or looking to enhance your security posture, Fastly is your partner for success.

Fast, secure, and scalable. Get started with Fastly today.
