

Client-Side Protection

Prevent theft and misuse of customer data with a complete set of tools for script inventory and management.

Protect website users without slowing down business

- ✓ Maintain compliance with PCI DSS 4.0.1
- ✓ Defend against Magecart attacks
- ✓ Reduce third-party script risk

Vulnerabilities in third-party scripts can lead to security gaps in your web applications and dangers like payment card skimming (Magecart) attacks. Fastly Client-Side Protection provides a simple set of tools to monitor scripts on pages and control what is loaded and executed in user browsers to protect websites and users from client-side attacks.

Get a complete inventory

- Build a comprehensive inventory of your pages, third-party scripts and business or technical justifications for their use, in minutes.

Third-party validated by Schellman Compliance on ability to assist PCI DSS requirements

Full reporting and Alerting

- Monitor third-party scripts in real time and detect unauthorized activity, and generate alerts on any unauthorized or malicious scripts.

Aide compliance

- Meet your industry-specific compliance objectives and address requirements for client-side security measures.
