

Edge Observer

The ability to monitor the status of your site, product, or services is essential. Gain full visibility over your internet traffic from granular to holistic insights and origin to edge data.

End to end visibility over your distributed systems

- ✓ Real-time metrics
- ✓ Granular insights
- ✓ Comprehensive historical context

Fastly Real-time Metrics enables developers, operators, and business teams to monitor network and application performance instantly. With over 200 metrics and real-time dashboards, users get a complete view of service health and user behavior to optimize performance.

Empower teams with real-time metrics

- Developers and operators can optimize uptime and reliability for any service by accessing instant, live metrics dashboards.

Gain granular insights for performance optimization

- Metrics provide detailed insight across various layers, enabling operators to identify and troubleshoot performance bottlenecks effectively.

Analyze metrics with comprehensive historical context

- Historical metrics, accessible back to service creation, allow for long-term analysis and proactive application performance strategies.
