

# API Security

Get the full picture of your API landscape: understand what exists, gain confidence that things are working as expected, and make targeted API abuse mitigation decisions across the Fastly platform.

## Defend your APIs wherever they are

- ✓ Uncover and record your public-facing APIs
- ✓ Streamline communication and delivery
- ✓ Build context for resilience

Everything gets done with teamwork, but your teams that build and secure applications have different needs and goals. Fastly API Security helps break down the barriers between them with shared data sets and tools to bring you the right context at the right time for collaborative decision making.

### Build context for resilience

- Identify problems early in the API lifecycle, and adjust before they break things and cause pain for your customers and internal teams. Align your API strategy with business goals, and prevent API misuse that leads to security breaches.

# 145

applications to secure in the average enterprise

### Streamline communication and delivery

- With security that protects everywhere, you'll bring transparency and security into your entire API lifecycle, and keep your platform and security teams in sync – with no surprises.

### Uncover and record your public-facing APIs

- Automatically detect new, updated, and unintentional API calls within Fastly's Edge network.
