

DDoS Protection

Keep any application and API available and performant with our adaptive solution built to automatically (and accurately) mitigate DDoS at any scale.

Turn on, DDoS gone

- ✓ Enhance resiliency
- ✓ Zero attack fees
- ✓ Reduce cloud spend

From startups launching their first mobile app to the world's largest e-commerce sites, every application and API on the internet is susceptible to DDoS attacks slowing their service, inflating cloud expenses, or, worse, taking them offline. With Fastly DDoS Protection, anyone can flip a switch and gain immediate protection.

Automatic mitigation

- Enable Fastly DDoS Protection with the flip of a switch to automatically block application DDoS attacks – from everyday nuisances through never-before-seen traffic spikes.

2

DDoS attacks every minute of 2025

Scalable network

- Gain the power of Fastly's 523+ Tbps of global capacity automatically absorbs massive network layer attacks while dropping any irrelevant non-HTTP/HTTPS traffic.

Versatile protection

- Ship new code on demand without worry of false positives, the solution requires no detection tuning.
